ABOUT US

A dark silhouette of the continents of North and South America is positioned on the right side of the page, partially overlapping the large grey circular graphic.

We are experts in project controls, delivering project management, commercial management, quantity surveying, risk, and planning services throughout the full project lifecycle.

From design, planning, construction, and commissioning, to beneficial operation, maintenance, and decommissioning of schemes.

OUR HISTORY

Driver Project Services first joined the Diales Group of companies in 2008, when we were known as the CMC Partnership. Under that mantel, we specialised in the preparation and negotiation of contractual claims, together with the measurement of road works and earthworks.

In 2010 we rebranded as Driver Project Services and now provide estimating, commercial management, contract management, quantity surveying, cost management, project management and planning and scheduling services to our clients.

As a client, you will benefit from our ability to introduce and implement the varied skills and knowledge from across the global Diales group, saving you time and money on your project.

We provide long-term support to our clients, offering complete commitment throughout the duration of a project.

As part of Diales Group plc, a Global Construction Consultancy who have offered solutions to the construction and engineering industry, since 1978, we are able to access the skills and resources of our teams across the globe and deliver the solutions our clients require.

OUR VALUES

This business is built on these values, which are important to us. We undertake every project with them at the core; ensuring we are providing an optimised and tailored service.

CLIENT-FOCUSED

We pride ourselves on listening to our clients' requirements, developing tailored solutions, and delivering high-quality results of real value.

FLEXIBLE

We match our service delivery model to our clients' requirements, whether that is a managed, interim, or integrated service.

OPTIMISED SERVICE

Recognising that our clients require and deserve a value-for-money offering, we work in partnership to select the optimum service delivery model and resources to maximise organisational and societal benefit.

TRUST

Over 80% of our business is repeat business. We build long-lasting relationships with our clients, where we work together to deliver successfully, time after time. Transparency is key, and we ensure our clients are informed and equipped to make the necessary decisions early on, which can influence a project outcome.

CLIENT CARE

Each commission we undertake has a nominated service director who is responsible for service quality delivery, HSQE, client liaison and satisfaction, as well as providing advice and support to the project team as required.

SOCIAL CULTURE

We are committed to building a positive and sustainable community wherever we operate, boosting economic growth and helping create a diverse and inclusive working culture.

SERVICE

Our client focused services provide assurance that your project is in safe hands. We collaborate with you and your team to deliver bespoke solutions, throughout the duration of a project.

Commercial and Contract Management

We offer a full range of pre and post tender commercial and contract management services, for both construction and engineering projects, from feasibility stage to the resolution of final accounts.

Pre-contract Services

As part of our fully integrated service to clients we offer a full range of pre-tender and measurement services for both construction and civil engineering projects.

Quantity Surveying

Our Quantity Surveyors provide financial and contractual expertise on projects ranging from small maintenance works to multi-million-pound schemes.

Cost Engineering

We have all heard the phrase “Cost is King” on a project, and our Cost Engineers are experts in their field. They believe it is essential for all parties with an influence on the cost of a project to be involved in the cost capture and reporting process. This enables early identification of potential increased cost areas, allowing mitigation of their impact in a timely pro-active manner, and production of an accurate estimate at completion.

Risk Management

Risk Management is the process of managing the effect of uncertainty on objectives, whether the resultant effect is positive (as with opportunities) or negative (as with threats).

project services

Project Management

Our Project Management process provides the structure of planning, management, control, and delivery of projects on behalf of our clients. This service is tailored to suit the various projects and development stages we are appointed to manage.

Procurement

We utilise our extensive product knowledge and first-hand experience in plant systems and supply chain solutions to offer procurement services that deliver improved process optimisation, best-in-class technology adoption, and system architecture design.

Planning and Programming

We offer a full range of planning services for both construction and civil engineering projects. Our planning capabilities span the complete life cycle of a project, from concept, design, and delivery, to asset management via a maintenance and shutdown regime.

Program Management

Our Program Management systems, processes and procedures are central to the way we conduct our business and execute projects. They have been designed so that we can easily tailor them to fit each individual client, and project needs, to deliver the best possible solution.

Training

We can add value to our clients' businesses by providing a range of training programmes, for construction and engineering staff: at all levels and abilities.

We offer training on NEC/ECC, FIDIC, IChemE, JCT, ICES, FCEC, and GC/Works as well as numerous bespoke forms.

We can also provide seminars, workshops, and commercial awareness courses.

Dispute Resolution

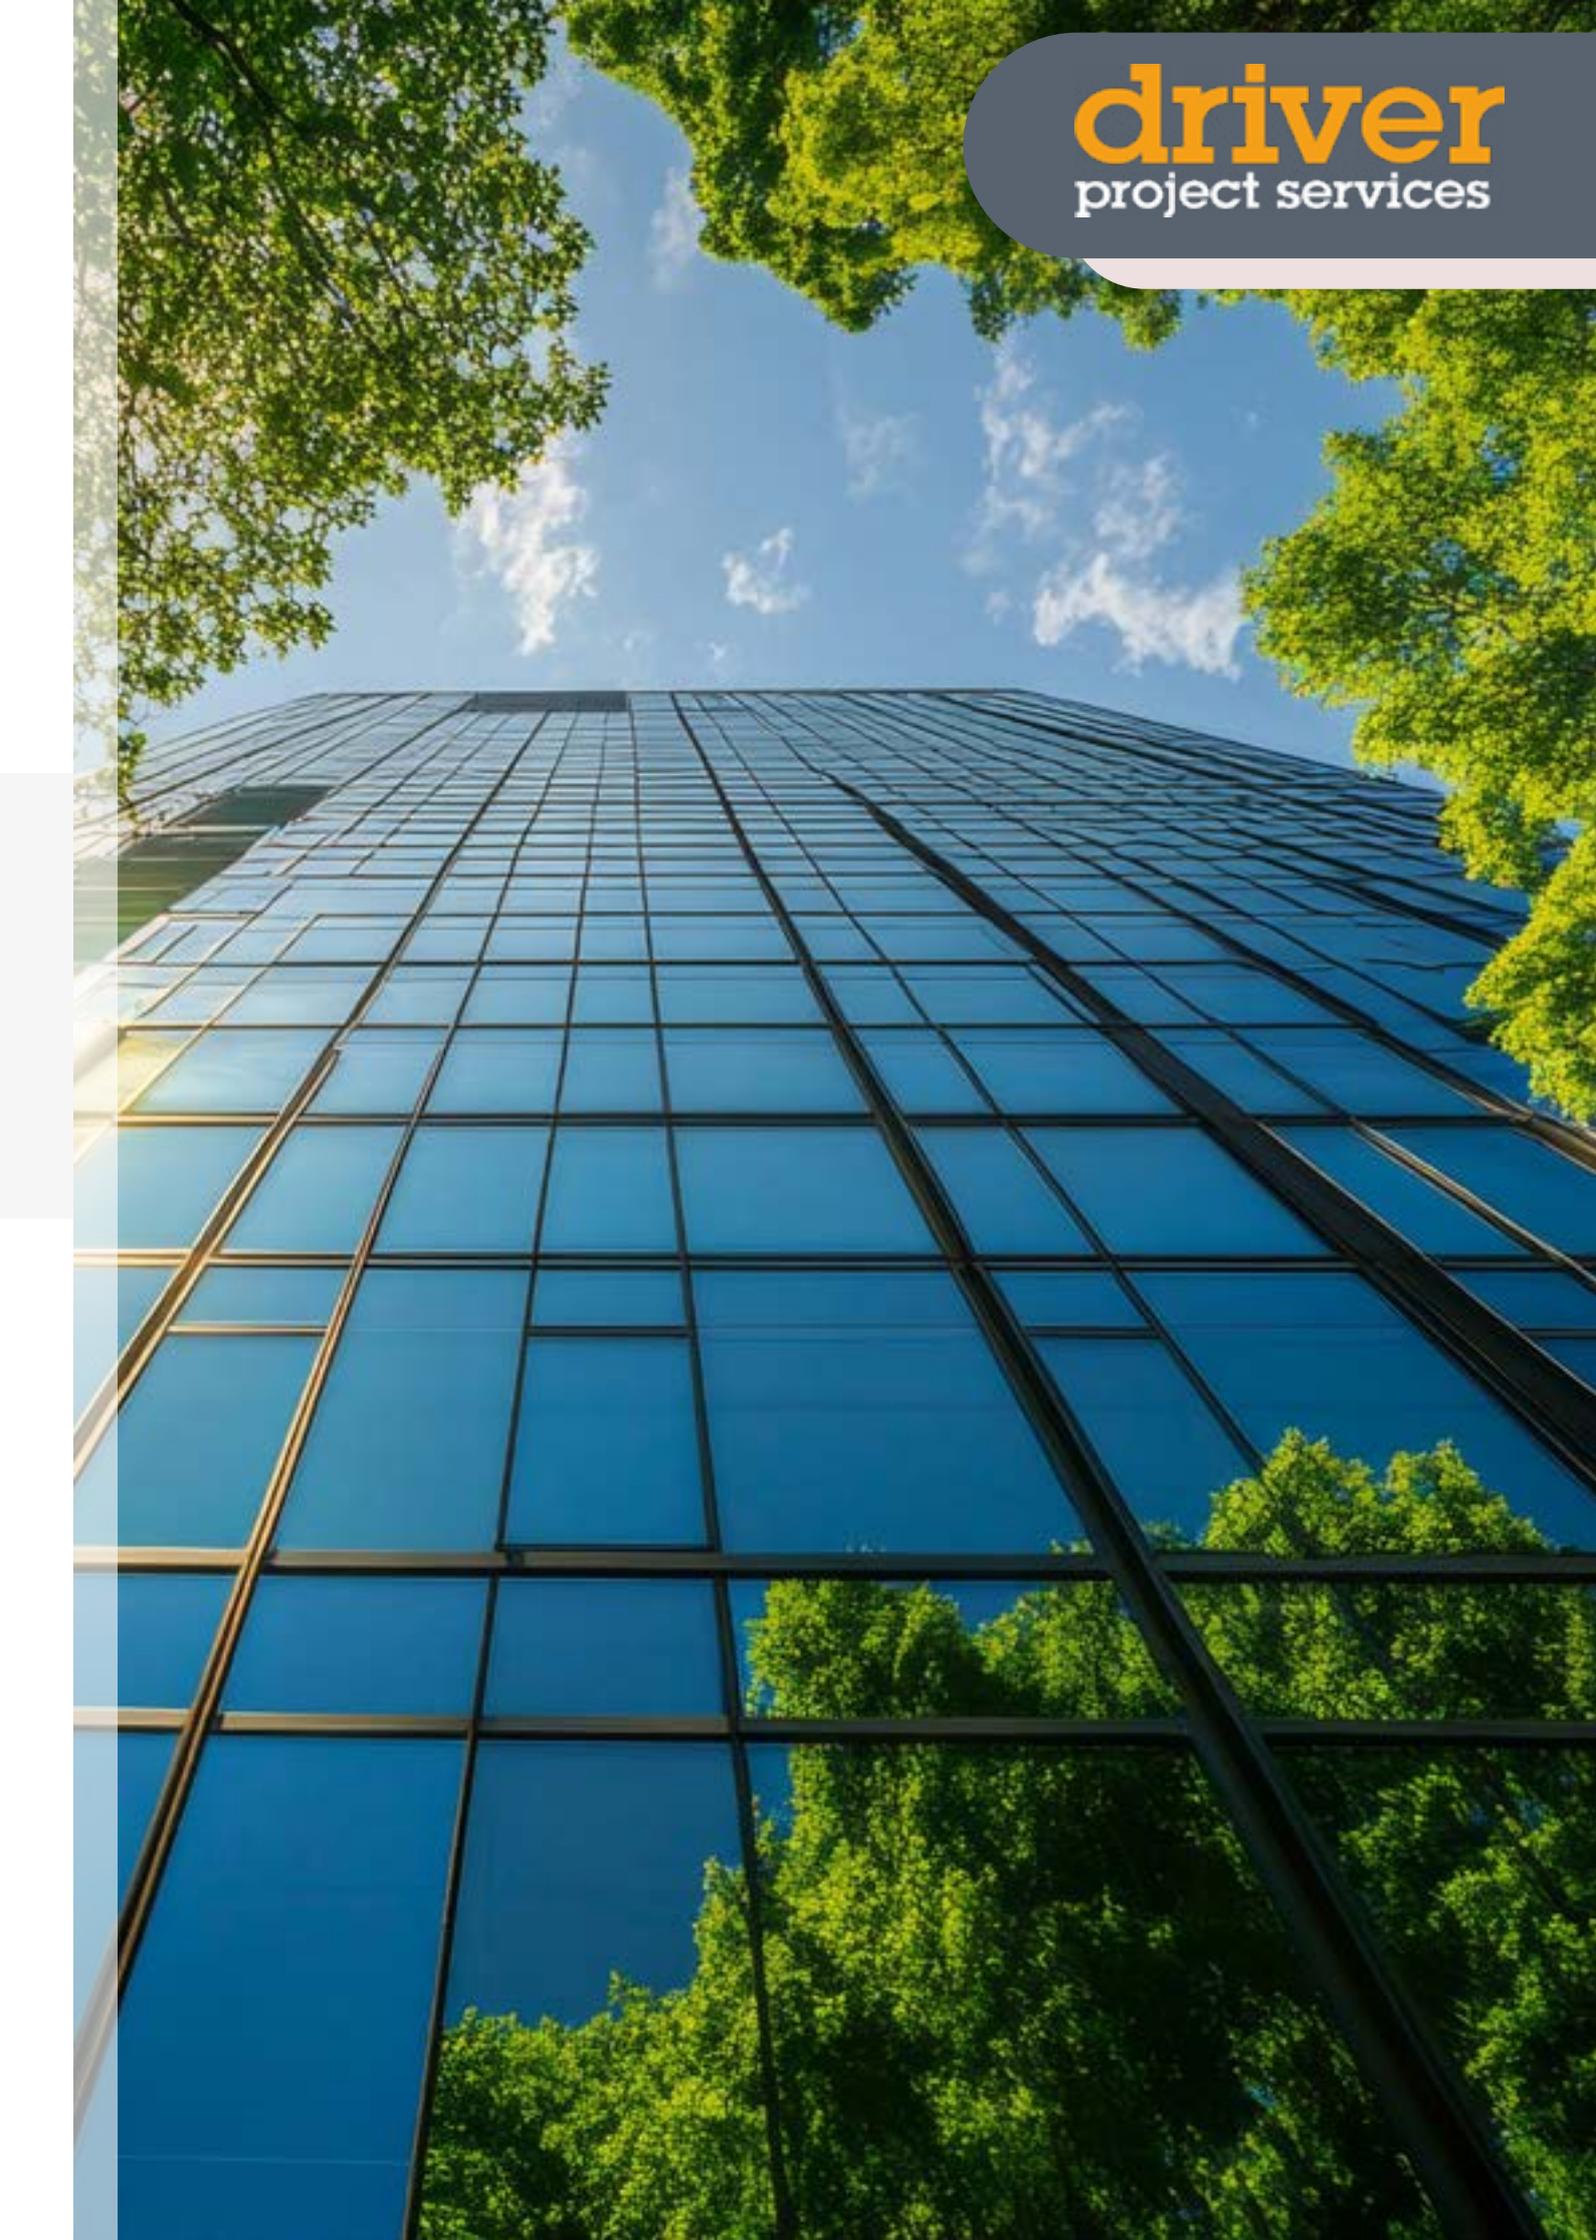

Our sister company, Diales, recognises the central role played by planning and scheduling in the project management of capital projects. Our planning specialists are drawn from diverse backgrounds across construction and related industries. They employ a wide variety of techniques and are conversant with all leading software.

Delay Analysis

On even the most well managed projects, disputes can arise between the parties to the contract. Diales, offer worldwide support in dispute management and resolution, as well as assisting clients in the assessment of risk, and avoidance of disputes- working closely with legal practices in construction and engineering litigation.

Expert witness support services are available through our sister company Diales. For more information visit www.Diales.com

OUR SECTORS

Our expertise and experience in the construction industry enables us to successfully deliver for our clients, from project inception to completion.

Building and Property

Our experience includes traditional, design and build, partnering, and PFI, under standard forms of contract and bespoke contract management.

Heritage

Heritage projects can be complex and costly. Our experience of working on some of the UK's most recognisable heritage sites has enabled us to develop specialist knowledge in the use of traditional materials and skills, as well as utilising modern solutions to historic problems.

Healthcare

Our experienced Healthcare team understand that as our population grows and diversifies, both demographically and geographically, our healthcare providers are under extreme pressure to find new and innovative solutions to our changing needs.

Energy

We bring an integrated, multi-disciplinary project controls capability that provides the assurance and insight required to deliver complex energy sector projects successfully.

Infrastructure

We have extensive experience working with, and understanding, both standard and specialist forms of contract to provide our clients with the most positive outcomes.

Oil and Gas

We support both client organisations and contractors with project controls services across the offshore oil and gas and marine industries, in the UK and internationally.

Public and Third Sector

We have enjoyed a long and successful relationship with a wide range of public sector organisations including local authorities, healthcare trusts, voluntary and charitable organisations.

Marine

Marine engineering represents one of the most demanding environments for project delivery. We apply our extensive sector experience to provide robust project controls and delivery assurance.

Process and Industrial

In recent times, the process and industrial sector has faced immense pressure on capital and operating expenditure budgets due to global competition and the need to reduce emissions. We assist clients in navigating these challenges by providing integrated project controls, cost certainty, and schedule assurance.

Mining

As one of the world's largest and most important industries, the mining of coal, metals, and minerals plays a critical role in global economic growth. We have a proven track record of delivering project controls services across the mining sector, providing certainty and control on complex projects.

Mechanical, Electrical and Public Health

We offer a full range of commercial and quantity surveying services, specialising in the Mechanical, Electrical and Public Health disciplines serving the everchanging construction industry. Our clients include key consultants and end-users as well as major building contractors and M&E providers
